Piercing For Ears
Aftercare

EAR CARE INSTRUCTIONS

Only valid when using STUDEX® products.

Always wash hands thoroughly before touching studs or ear.

Cleanse front and back of the ear two times a day with STUDEX® Ear Care Lotion or Gel without removing studs.

Apply lotion or gel to the front and back of the stud and gently slide forward and back. Repeat twice daily.

Keep hair spray, soap, shampoo and other preparations away from the ear.

After shampooing, the ear should be rinsed with clear water and then apply STUDEX® Ear Care Lotion or Gel as described above.

The pierced area should be **CLEANSED** with STUDEX® Ear Care Lotion or Gel then kept **DRY**, especially after swimming or exercise.

DO NOT remove the studs from ear during ear care procedure.

DO NOT handle your ears and/or studs unnecessarily.

DO NOT push the clasp along the post towards the ear. This is essential as tight earrings may lead to infection.

DO NOT use alcohol or hydrogen peroxide to care for newly pierced ears.

EAR LOBE:

Leave studs on ears for six weeks continuously.

After six weeks, the studs can be removed and other post-type earrings may be worn continuously.

Use only post style earrings continuously for the first six months after piercing. The post should be surgical stainless steel or other hypoallergenic material. **FOR BEST RESULTS WE RECOMMEND THE STUDEX® HYPOALLERGENIC LINE OF FASHION EARRINGS.**

Minor pain/redness may occur immediately after piercing - this is normal. This should settle within forty eight hours provided proper after care is followed.

If undue pain, swelling or redness occurs, consult your doctor **IMMEDIATELY**. If infection has set in, do not remove the ear piercing stud until you have consulted your doctor.

EAR CARTILAGE:

Leave studs in ears for twelve weeks continuously.

Use only post style earrings continuously for the first twelve months after piercing. The post should be surgical stainless steel or other hypoallergenic material.

Due to the nature of ear cartilage, extra care should be taken during the healing period. Minor pain/redness may occur immediately - this is normal. This will settle within forty eight hours provided proper after care is followed.

If undue pain, swelling or redness occurs, consult your doctor **IMMEDIATELY**. If infection has set in, do not remove the ear piercing stud until you have consulted your doctor.
